Coxin III - Actinobacillus pleuropneumoniae (serotype 2)

NyAlternate names: RTX-toxin IIIA (ApxIIIA)

C;Species: Actinobacillus pleuropneumoniae

C;Date: 14-Jul-1995 #sequence_revision 15-Nov-1996 #text_change 18-Jun-1999

C;Accession: S51784

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         total II - Actinobacillus suis

N;Alternate names: ashA protein; cytolysin II; RTX-toxin II
C;Species: Actinobacillus suis
C;Species: Actinobacillus suis
C;Date: 31-Dec-1993 #sequence_revision 08-Nov-1996 #text_change 05-Dec-1998
C;Accession: A43834
C;Accession: A43834
Infect. Immun. 60, 2166-2173, 1992
A;Title: Molecular characterization of an RTX toxin determinant from Actinobacillus suis
A;Reference number: A43834; MUID:92267623; PMID:1587585
A;Accession: A43834
A;Molecule type: DNA
A;Reference number: BNA
A;Resprimental Bource: isolate 3714
A;Note: sequence extracted from NCBI backbone (NCBIN:104212, NCBIP:104211)
C;Comment: This organism causes acute fatal septicemia in young pigs.
C;Comment: This organism causes acute fatal septicemia in young pigs.
C;Comment: attacks cell membranes and causes cell lysis
C;Superfamily: hemolysin A; hemolysin A homology
C;Keywords: calcium binding; cytolysis; lipoprotein; tandem repeat;
F;24-787/Domain: hemolysin A homology *RiXA>
F;719-801/Region: 9-residue repeats (G-G-X-G-[DN]-D-X-[LVIYF]-X)
F;557/Binding site: palmitate (Lys) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RTX-toxin I - Actinobacillus pleuropneumoniae

NyAlternate names: hemolysin ApxI

A.Title: Structural analysis of the Actinobacillus pleuropneumoniae-RTX-toxin I (ApxI) c

A;Reference number: 139641; MUID:93366425; PMID:8359891

A;Recession: 139643

A;Accession: 139643

A;Molecule type: DNA
A;Accession: B43599
A;Status: preliminary
A;Molecule type: DNA
A;Molecule type: DNA
A;Rolacule type: DNA
A;Crowsert: This organism causes porcine pleuropneumonia.
C;Genetics:
A;Gene: apxIIA; appA; clyIIA
C;Function:
A;Description: attacks blood cell membranes and causes cell lysis
C;Superfamily: hemolysin A, hemolysin A homology
C;Keywords: calcium binding; cytolysis; exotoxin; hemolysis; lipoprotein; tandem repeat;
F;243-787/Bomain: hemolysin A, homology
F;719-801/Region: 9-residue repeats (G-G-X-C-[DNI-D-X-[LNIYF]-X)
F;557/Binding site: palmitate (Lys) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

A;Accession: JE0183
A;Molecule type: protein
A;Residues: 1-275 <YAM-
C;Comment: This enzyme catalyzes the hydrolysis of beta-1,4-linked homopolymers or oligor
C;Superfamily: alcohol sulfotransferase
C;Keywords: glycosidase; hydrolase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C:Comment: This enzyme, a member of class III plant chitinases, which catalyzes the hydro
or protection against fungal pathogens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hypothetical protein accA [imported] - Agrobacterium tumefaciens (strain C58, Dupont)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MISCELLANBOUGS: The hemolygin of E.coli is produced predominantly by strains causing extraintestinal infections, such as those of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE=85258115; PubMed=3894051; Nicaud J.-M., Mackman N., Gray L., Holland I.B.; Nicaud J.-M., Mackman N., Gray L., Holland I.B.; Characterisation of HlyC and mechanism of activation and secretion of haemolysin from E. coli 2001."; FEBS Lett. 187:339-344(1985).
-!- FUNCTION: Bacterial hemolysins are exotoxins that attack blood cell membranes and cause cell rupture by mechanisms not clearly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SUBCELLULAR LOCATION: Secreted.

DOMAIN: The Gly-rich region is probably involved in binding calcium, which is required for target cell-binding or cytolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     activity.

DOWAIN: The three transmembrane domains are believed to be involved in pore formation by the cytotoxin.

PIM: Palmitoylated by hlyC. The toxin only becomes active when
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

Infect. Immun. 60:2166-2173 (1992).
Infect. Immun. 60:2166-2173 (1992).
-!- PUNCTION: One of the virulence factors of A.suis might be a secreted cytotoxin, possibly the extracellular hemolysin.
-!- SUBCELLULAR LOCATION: Secreted.
-!- DOMAIN: The Gly-rich region is probably involved in binding calcium, which is required for target cell-binding or cytolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         involved in pore formation by the cytotoxin (By similarity).
-!- PTM: Palmitcylated by liktc. The toxin only becomes active when modified (By similarity).
-!- SIMILARITY: BELONGS TO THE RTX PROKARYOTIC TOXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the cytotoxin (By similarity)

Immun. 59:4497-4504(1991).
-!- FUNCTION: One of the virulence factors of A.pleuropneumoniae, which shows a weak hemolytic activity and is moderately cytotoxic for alveolar macrophages and neutrophils.
-!- SUBCELLULAR LOCATION: Secreted.
-!- DOMAIN: The Gly-rich region is probably involved in binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chang Y.-F., Young R., Struck D.K.; "Cloning and characterization of a hemolysin gene from Actinobacillus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
calcium, which is required for target cell-binding or cytolytic activity (By similarity).

-!-DOMAIN: The three transmembrane domains are believed to be involved in pore formation by the cytotoxin (By similarity).

-!-PTM: Palmicoylated by apxIIC. The toxin only becomes active when modified (By similarity).

-!-SIMILARITY: BELONGS TO THE RIX PROKARYOTIC TOXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-OCT-1996 (Rel. 34, Created)

STRAIN=S 4074 / Serotype 1;

Chang Y., Ann N.;

Chang Y., Chin N.;

Submitted (JAN-1994) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: One of the virulence factors of A.pleuropneumoniae,
which has a strong hemolytic activity and is cytotoxic for
alveolar macrophages and neutrophils.

-I- SUBCELLULAR LOCATION: Secreted.

-I- DOMAIN: The Gly-rich region is probably involved in binding
calcium, which is required for target cell-binding or cytolytic
                                                                                                                                                                                                                                                                                                                                     activity.

-!- DOMAIN: The three transmembrane domains are believed to be involved in pore formation by the cytotoxin (By similarity).

-!- FTM: Palmitoylated by apxIC. The toxin only becomes active when modified (By similarity).

-!- MISCELIANEOUS: ApxIA is partially deleted in serotypes 2, 4, 6, 8, 12, and totally deleted in serotype 3.

-!- MISCELIANEOUS: The sequence shown is that of serotype 1.

-!- MISCELIANEOUS: The sequence shown is that of serotype 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              E EMBL; X52899; CAA48586.1; -.

-!- DOMAIN: The three transmembrane domains are believed to be involved in pore formation by the cytotoxin (By similarity).
-!- PTM: PALMITOYLATED BY ARXIC. The toxin only becomes active when modified (By similarity).
-!- MISCELLANEOUS: APXIA is partially deleted in serotypes 2, 4, 6, 8, 12, and totally deleted in serotype 3.
-!- MISCELLANEOUS: The sequence shown is that of serotype 10.
-!- SIMILARITY: BELONGS TO THE RIX PROKARYOTIC TOXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN=13039 / Serotype 10;

MOICCULAR TAILY OF R.Y.C., Olah-Winfield E.;
Molecular analysis of the leukotoxin determinants from Pasteurella haemolytica serotypes 1 to 16.";
Infect. Immun. 61:5001-5007(1993).
-i- FUNCTION: Bacterial hemolysins are exotoxins that attack blood cell membranes and cause cell rupture by mechanisms not clearly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         defined.
--- SUBCELLULAR LOCATION: Secreted.
--- DOMAIN: The Gly-rich region is probably involved in binding
calcium, which is required for target cell-binding or cytolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  activity.
-!- DOMAIN: The three transmembrane domains are believed to be involved in pore formation by the cytotoxin (BY SIMILARITY).
-!- PTM: Palmitoylated by lktC. The toxin only becomes active when modified (By similarity).
-!- SIMILARITY: BELONGS TO THE RTX PROKARYOTIC TOXIN FAMILY.
                                                                                                                                                                                Bacteria; Proteobacteria; Gammaproteobacteria; Pasteurellales;

Highlander dexpression of the Pasteurella haemolytica Leukotoxin.";
J. Bacteriol. 172:2343-2350(11990).
-!- FUNCTION: Bacterial hemolysins are exotoxins that attack blood
cell membranes and cause cell rupture by mechanisms not clearly
                                                                                                                                                                                                                                                                                                                                                                                                                                            SUBCELLULAR LOCATION: Secreted. DOMAIN: The Gly-rich region is probably involved in binding calcium, which is required for target cell-binding or cytolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      activity.

DOMAIN: The three transmembrane domains are believed to be involved in pore formation by the cytotoxin (By similarity).

PIM: Palmitcylated by lktC. The toxin only becomes active when modified (By similarity).

SIMILARITY: BELONGS TO THE RTX PROKARYOTIC TOXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             POTENTIAL.
6 X REPEATS, GLY-RICH (BY SIMILARITY).

Lainson F.A., Murray J., Davies R.C., Donachie W.;
"Characterization of epitopes involved in the neutralization of Pasteurella haemolytica serotype Al leukotoxin.";
Microbiology 142:2499-2507(1996).
-i- FUNCTION: Bacterial hemolysins are exotoxins that attack blood cell membranes and cause cell rupture by mechanisms not clearly
                                                                                                                                                                                                                                                                                                                                       DOMAIN: The Gly-rich region is probably involved in binding calcium, which is required for target cell-binding or cytolytic
                                                                                                                                                                                                                                                                                                                                                                    activity.
-!- DOMAIN: The three transmembrane domains are believed to be involved in pore formation by the cytotoxin (BY SIMILARITY).
-!- PTM: Palmitoylated by lktC. The toxin only becomes active when MODIFIED (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE RTX PROKARYOTIC TOXIN FAMILY.
                                                                                                          Bacteria; Proteobacteria; Gammaproteobacteria; Pasteurellales;

-!- FUNCTION: THIS PROTEIN IS FOUND IN THE RIBONUCLEOPROTEIN CORE AND
IS INVOLVED IN THE EARLY ASSEMBLY OF THE SOS SUBUNIT. IT IS NOT
INVOLVED IN THE FUNCTIONS OF THE MATURE 50S SUBUNIT.
-!- SIMILARITY: BELONGS TO THE L24P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           [1] —

Jr.; "Discharge effect on pancreatic exocrine secretion produced by toxins purified from Tityus serrulatus scorpion venom."; J. Biol. Chem. 266:3178-3185[1991]
Biosci. Biotechnol. Biochem. 58:1476-1478(1994).

-!- FUNCTION: CECROPINS HAVE LYTIC AND ANTIBACTERIAL ACTIVITY AGAINST
SEVERAL GRAM-POSITIVE AND GRAM-NEGATIVE BACTERIA.

-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Highest expression in fat body and hemocytes.
Is also expressed in Malpfahian tubules and to a much lesser
extent in midgut. Not present in silk gland.
-!- SIMILARITY: BELONGS TO THE CECROPIN PAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

"Cloning and characterization of the ribosomal protein genes in the spec operon of a prokaryotic endosymbiont of the pea aphid, Acytchosiphon kondoi.";

DNA Res. 1:103-114(1994).

-! FUNCTION: THIS PROTEIN IS FOUND IN THE RIBONUCLEOPROTEIN CORE AND IS INVOLVED IN THE EARLY ASSEMBLY OF THE 50S SUBUNIT. IT IS NOT INVOLVED IN THE FUNCTIONS OF THE MATURE 50S SUBUNIT.

(BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Genome sequence of Yersinia pestis KIM.";
J. Bacteriol. 184:4601-4611(2002).
-!- FUNCTION: Seems to be the binding site for several of the factors involved in protein synthesis and appears to be essential for accurate translation (By similarity).
-!- SIMILARITY: BELONGS TO THE L12P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A.
